Ghostbusters

Introduction

You are going to make a ghost-catching game!

code club

What you will need

Hardware

• A computer

Software

• Scratch 3 (either online or offline)

What you will learn

- · How to use random numbers to animate sprites
- How to react to mouse clicks
- How to create a timer

Step 1: Animate a ghost

Activity Checklist

Open a new empty Scratch project.

Add in a new ghost sprite and a suitable Stage backdrop.

Add code to your **ghost** sprite so that the ghost appears and disappears forever when the green flag is clicked.

This is what your code should look like:

Test and save your project.

Step 2: Random ghosts

Your ghost is really easy to catch at the moment, because it doesn't move!

Activity Checklist

Can you add code to your ghost so that, instead of staying in the same position, the ghost appears at random positions on the Stage?

Your code could look like this:

Challenge: more randomness

Can you add code to your ghost sprite to make the ghost wait a random amount of time while it is hidden? Can you use the set size block to make your ghost a randomly larger or smaller each time it appears?

Step 3: Code for catching ghosts

Now you're going to add code to your game so that the player can catch ghosts!

Activity Checklist

Can you make your ghost disappear when it's been caught? The player should be able to click ghosts to catch them.

If you test your game and find catching ghosts difficult, you can play the game in full-screen mode by clicking on this button:

Your code should look like this:

Challenge: add a sound

Can you add code to your ghost so that the ghost makes a sound when it's caught?

Step 4: Add a score

Now you're going to make your game more interesting by keeping score!

Activity Checklist

Create a new variable called score.

Can you keep track of the player's score? Players should score points when they click on ghosts to catch them.

Each time a player clicks on a ghost, their score should increase.

Δ

Step 5: Add a timer

Now you're going to add a timer so that the player only has ten seconds to catch as many ghosts as possible.

Activity Checklist

Create a new variable called 'time'.

Can you add a timer to your Stage to give your player only 10 seconds to catch ghosts?

Your timer should:

- Start at 10 seconds
- Count down every second

The game should stop when the timer gets to 0. Here is the code you should add to create a timer:

 \Box

Ask a friend to test your game. How many points can they score?

If your game is too easy, you can:

- Give the player less time
- Make the ghosts appear less often
- Make the ghosts smaller

Change and test your game a few times until you're happy with its level of difficulty.

You need to think about some things for each sprites you want to add:

- How big should the sprite be?
- Should it appear more or less often than the ghost sprite?
- What does it look/sound like when it gets caught?
- How many points does the player win (or lose) for catching the sprite?

If you need help, you can back through to the instructions in the previous steps, or ask a friend!
